

Wide Range of Industries and Applications

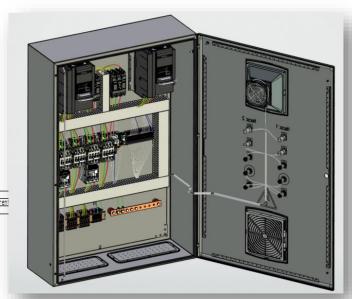

Switchgears and control cabinets

Instrument engineering

XS1

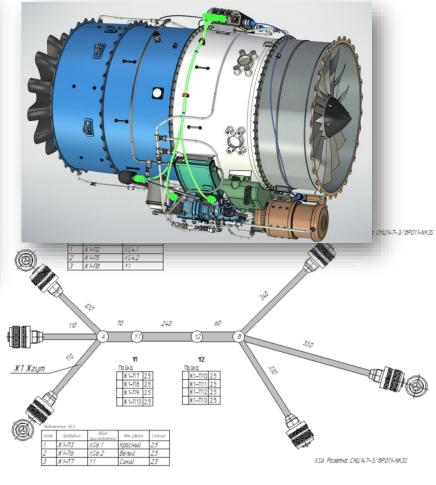

HL1

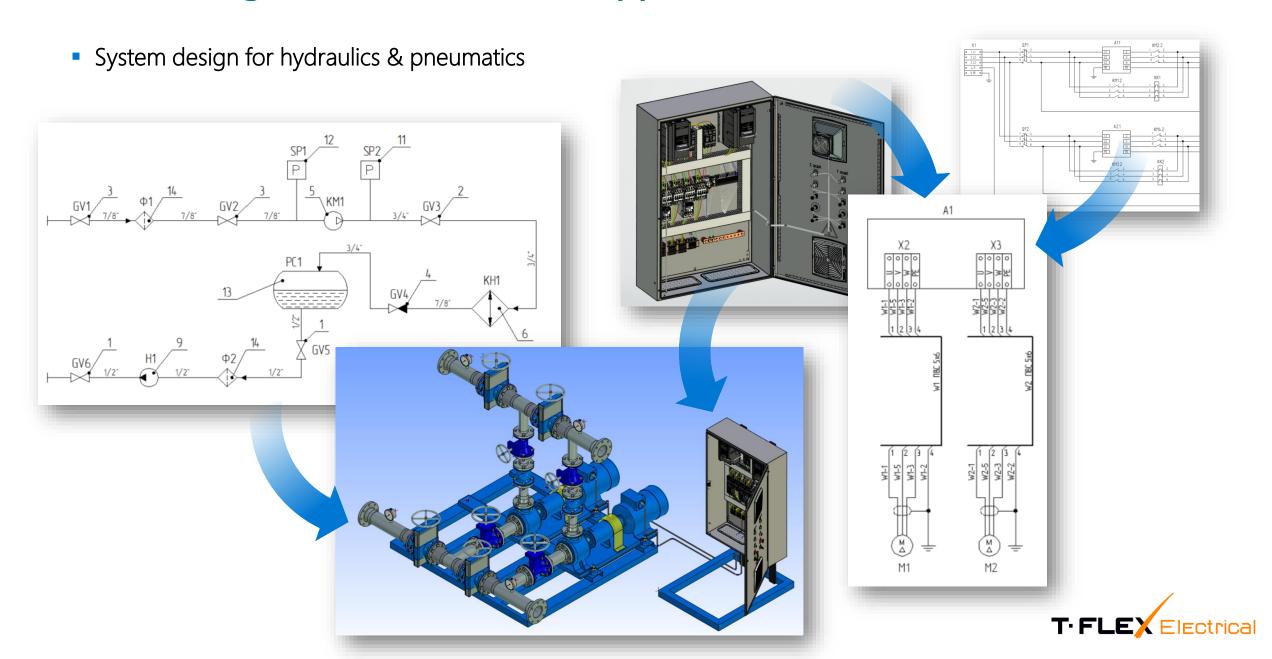

Onboard cable networks

Wide Range of Industries and Applications

Purpose of System and Tasks to be Solved

1 Diagrams

Placement of 3D components

Design of 3D cables

Design reports

5 Assembly drawings

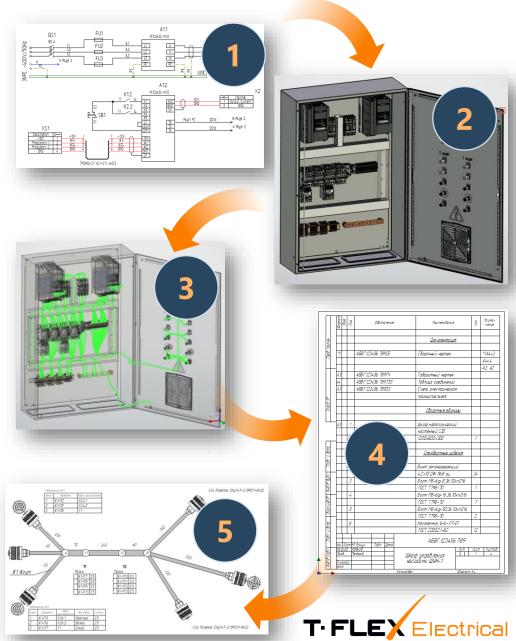

Design of electrical diagrams
Wires and harness layout in 2D

Placing 3D models of electrical components

Tracing electrical wiring on a 3D model of equipment

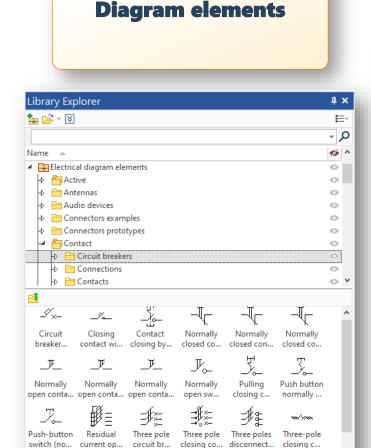

Creation of text and tabular design documentation

Creation of graphical design documentation

Library of Electrical Components

Extensive default library of various components

3D Model : Model Elements Library Explorer Parameters

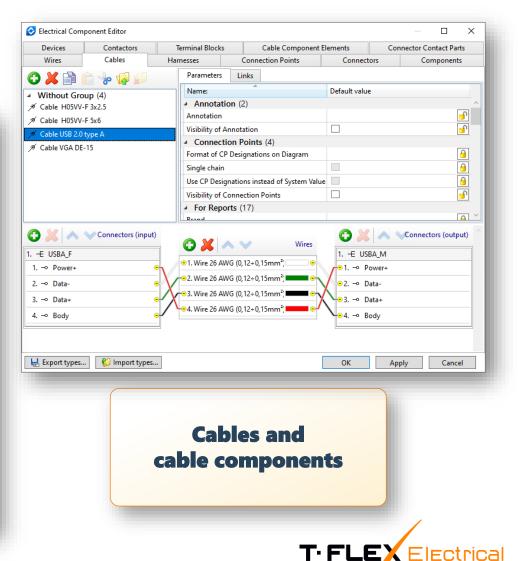

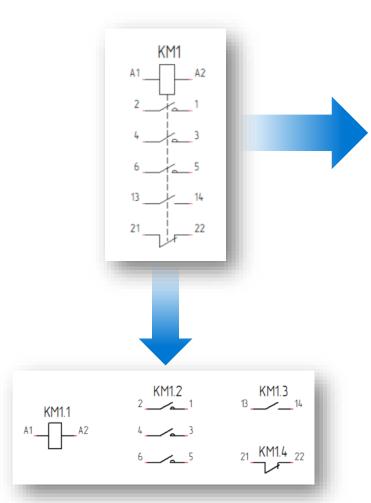

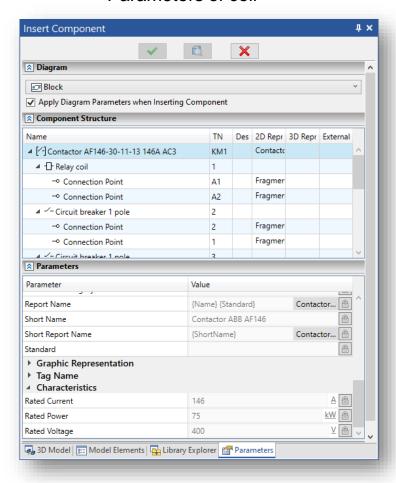

Diagram Elements

- A set of parameters depending on the selected element type
- Different ways to display components on a diagram

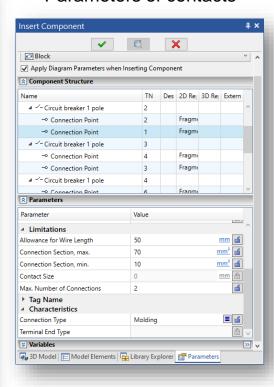

Parameters of coil

Parameters of contacts

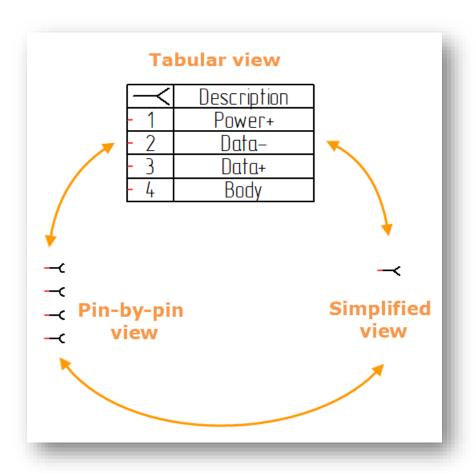

Parametrization of Connectors

Customization of graphic symbol

- Selecting the type of connector symbol
- Flexible display settings of each type

Customization of 3D model

- Intelligent selection of components
- Formation of the composition

Automatic Package of Connectors

Automatic selection of the connector components considering:

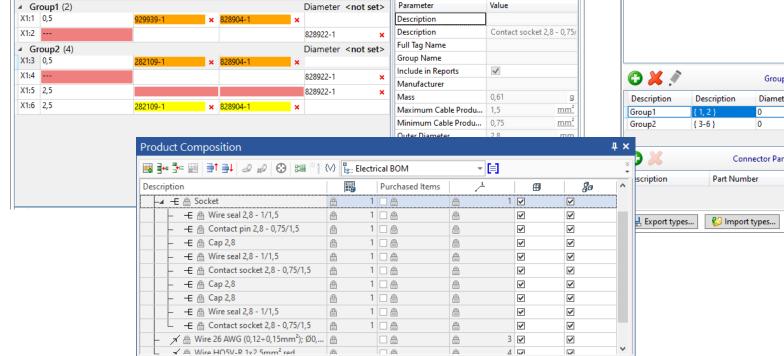

- cross-section of the connected wire
- Adjustment of the connector composition

Contact-part 📝 💥 Seal

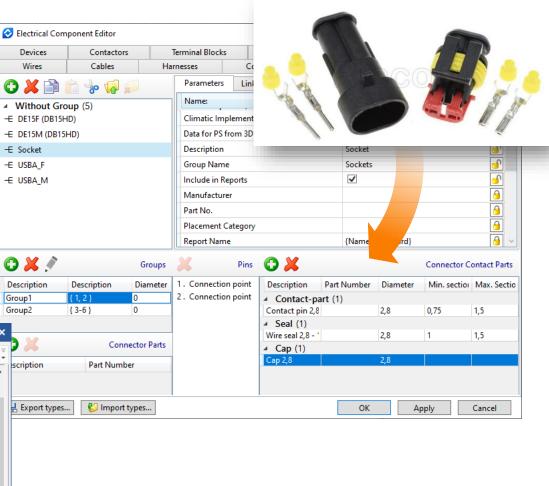

문 Connector Detailing

TN Connection Section

Including the components into the product composition

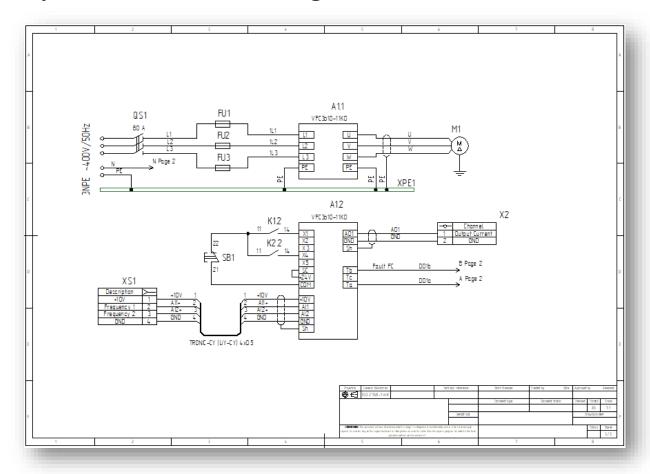

Contact-part | Seal | Cap

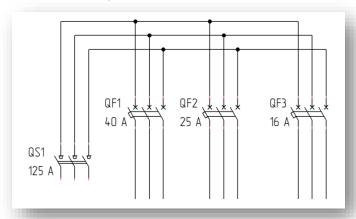

Design of Electrical Diagrams

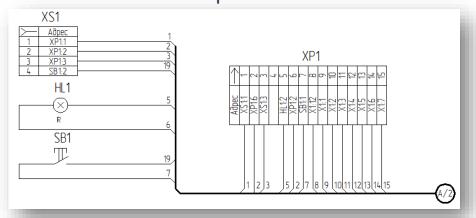

- Automatic assignment of element tag names
- Automatic linking of connection lines to pins
- Analysis of diagram for errors
- Layout of schemes according to different standards

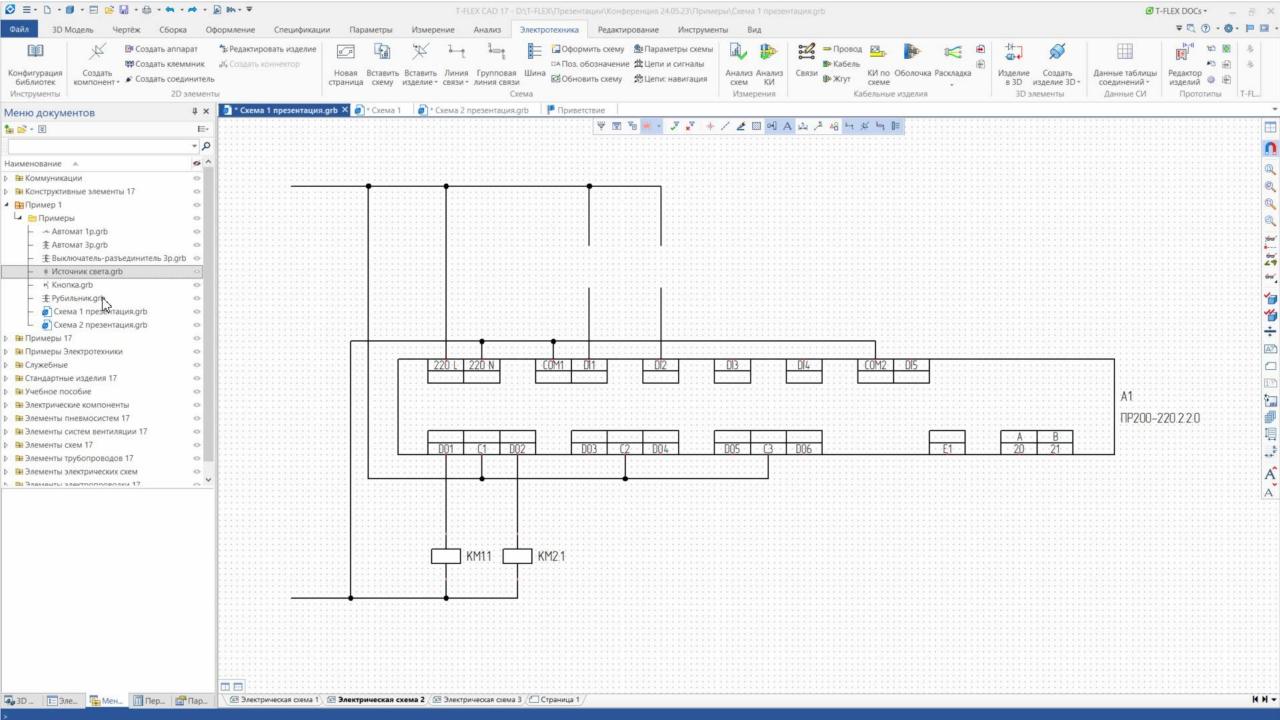

Multiple connection

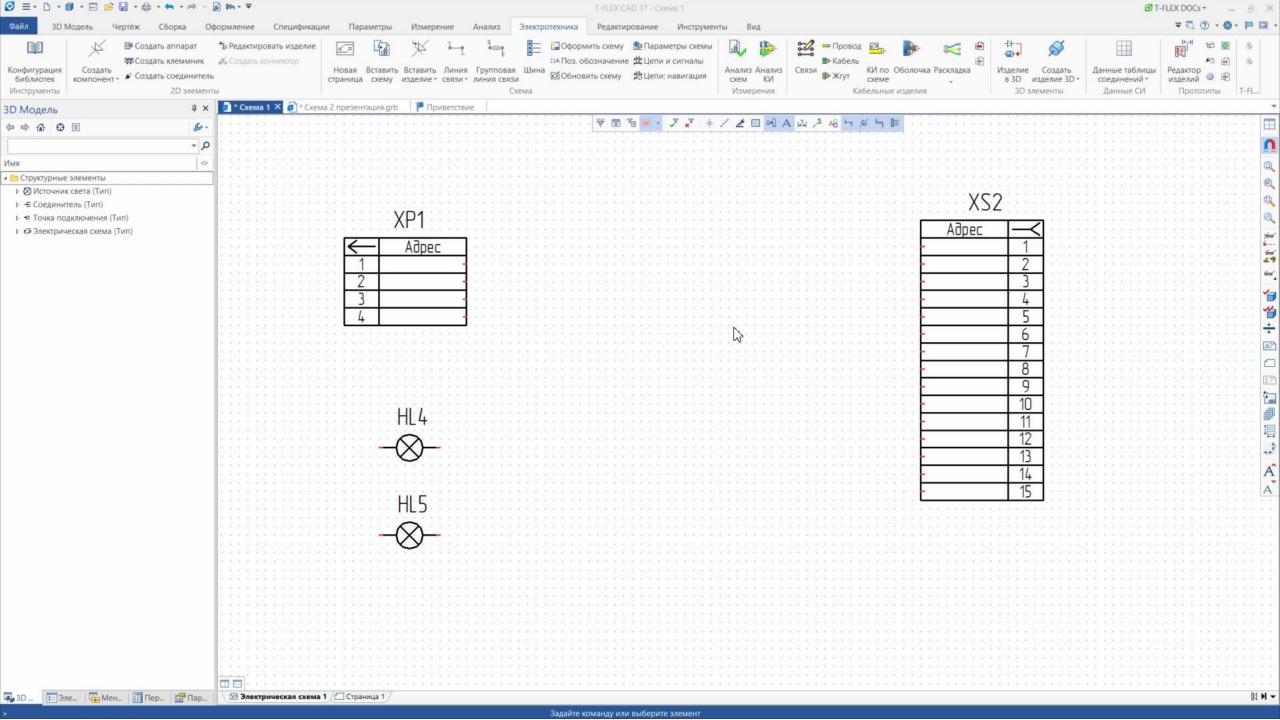

Group connection lines

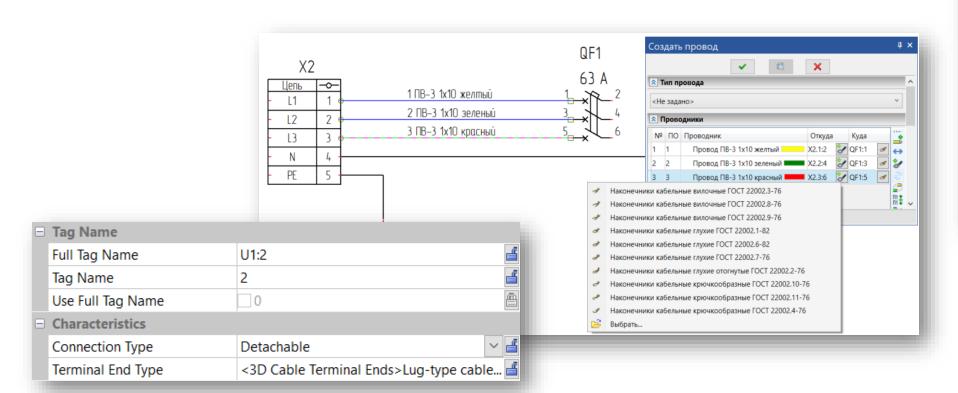

Assignment of Cable Products on Connection Lines

- Selecting wires from the cable product library
- Cable assignment and harness creation directly in the diagram
- Automated cable lug selection
- Connection control: cross-section, number of conductors
- Display of cable product parameters on the connection line

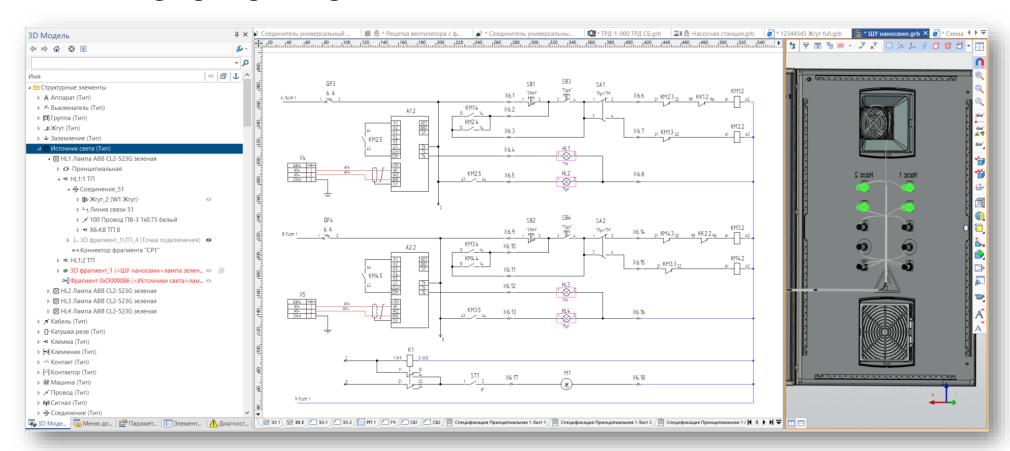

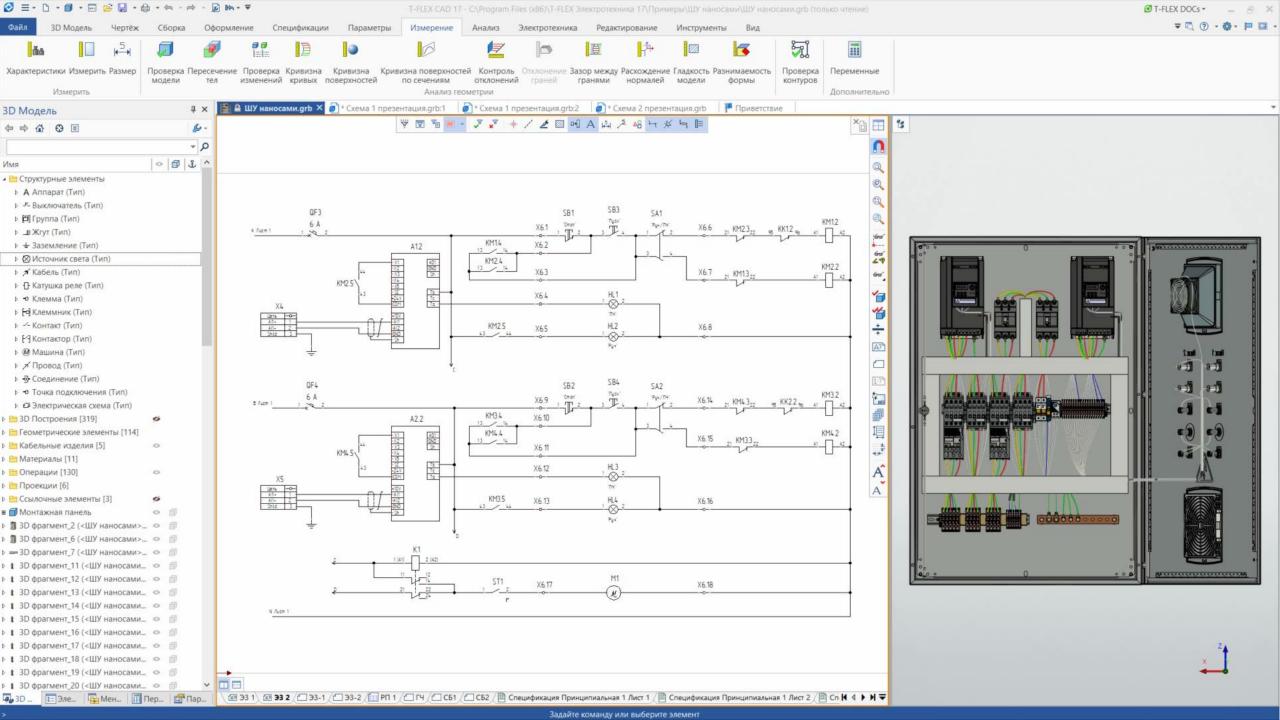

Project Development

- Automatic generation of data information model
- Basis for generating design documentation
- Interactive highlighting of diagram elements and 3D models

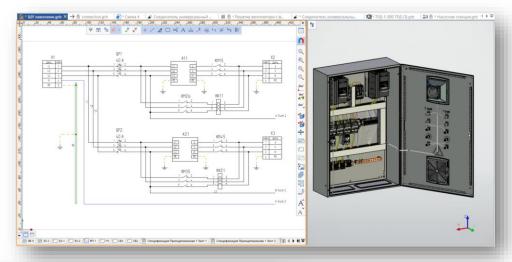

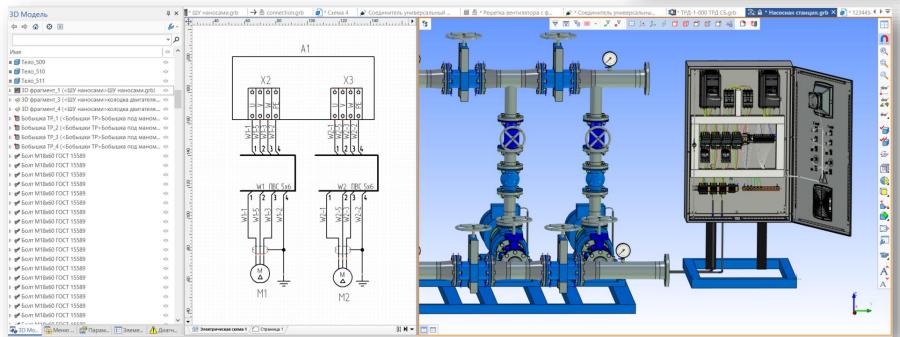

Teamwork Tools

"Bottom-up" design

- Inserting a fragment as part of a top-level diagram
- Simplified view for lower level products
- Linking a fragment to the initial diagram

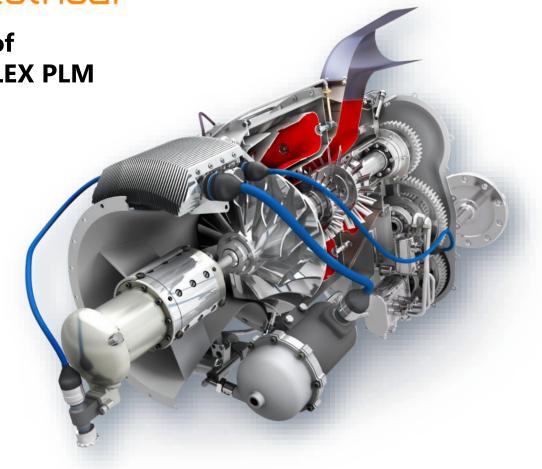

Layout of Electrical Equipment in 3D Scene

Component of single platform T-FLEX PLM

Access to T-FLEX CAD tools

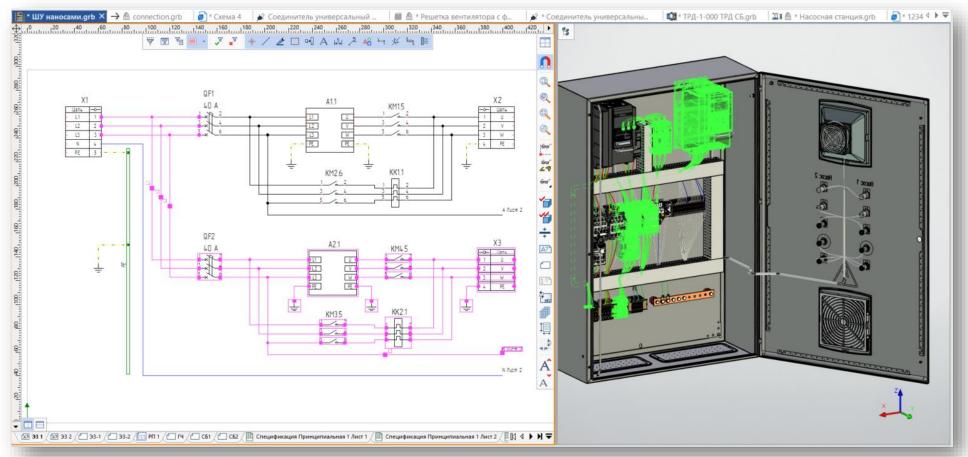

- Parametric design
- Product configuration
- Creation of mechanical drawings
- Unified data model for diagrams and 3D models

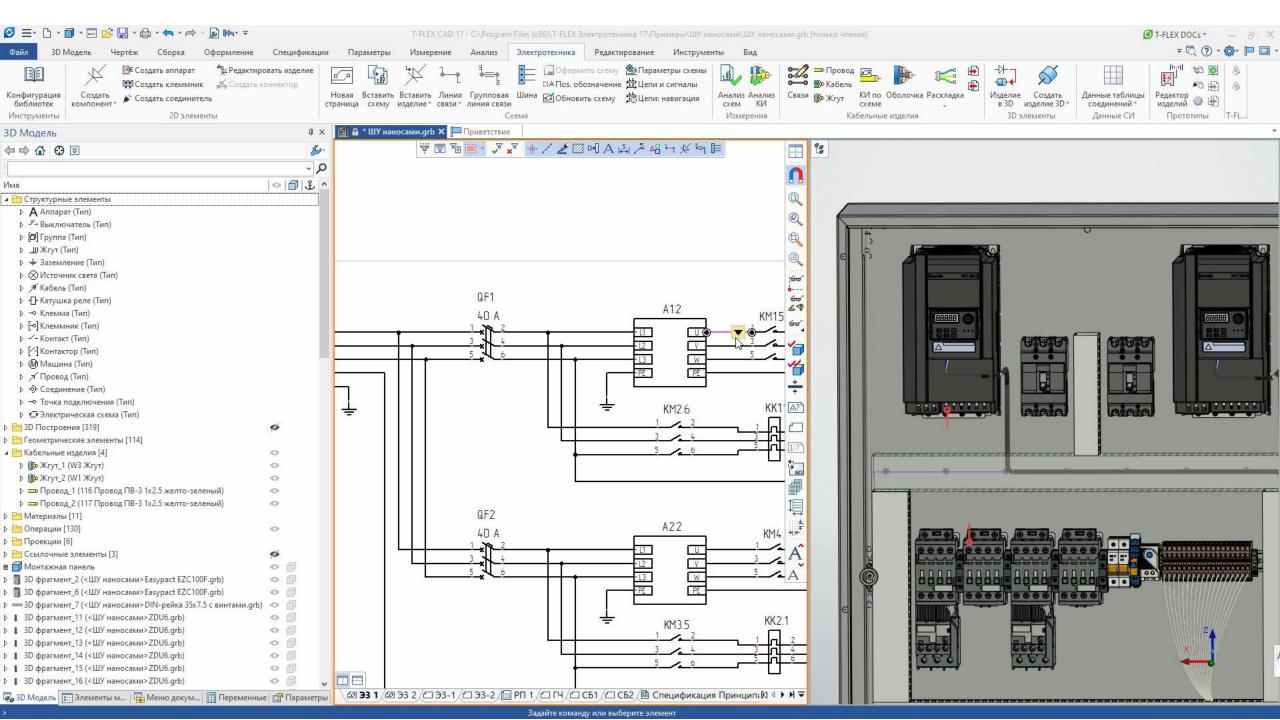

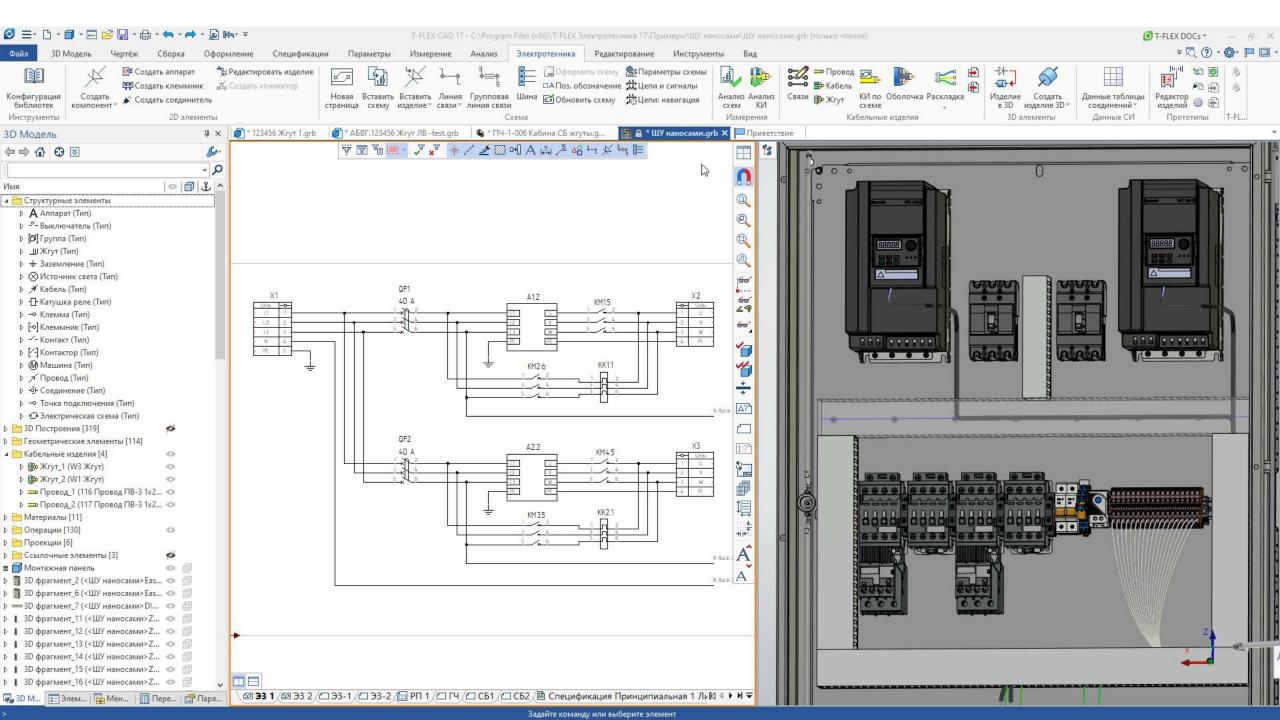

Associative Link of Diagram Elements with 3D Model

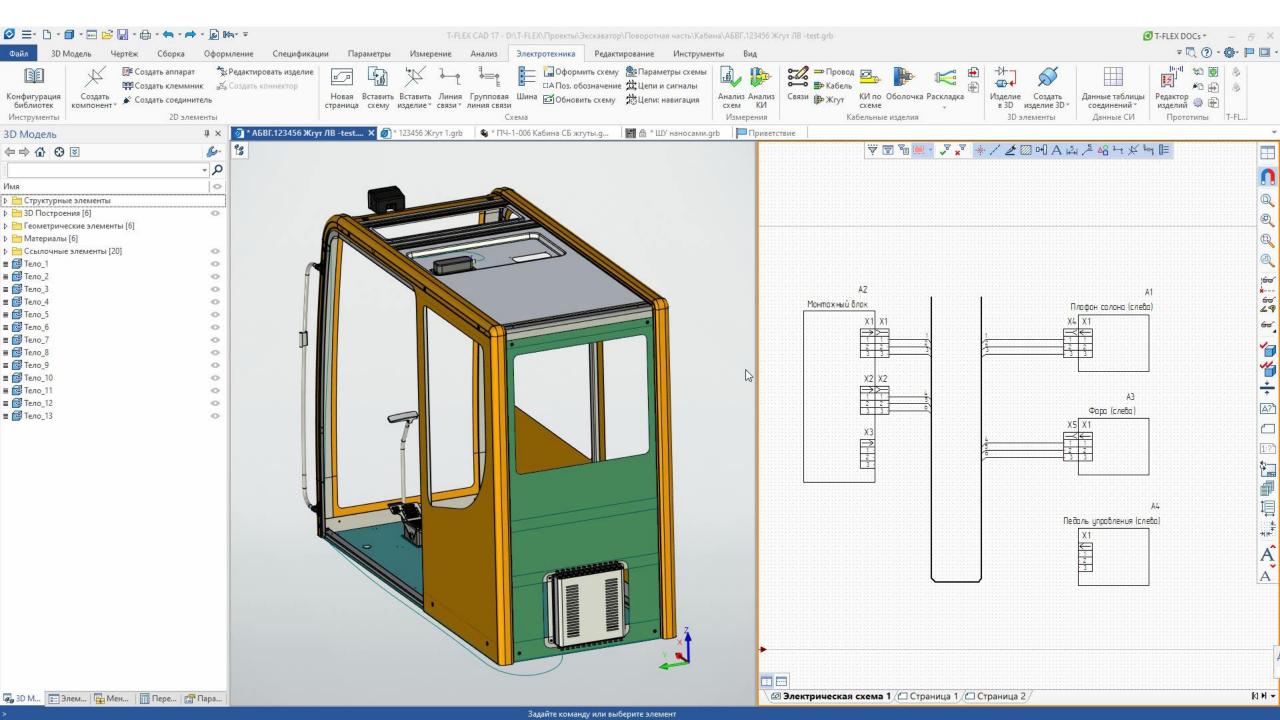

- Automatic linking when inserting a library 3D model
- Linking with 3D model in semi-automatic and manual modes
- Linking with fragments of any assembly level

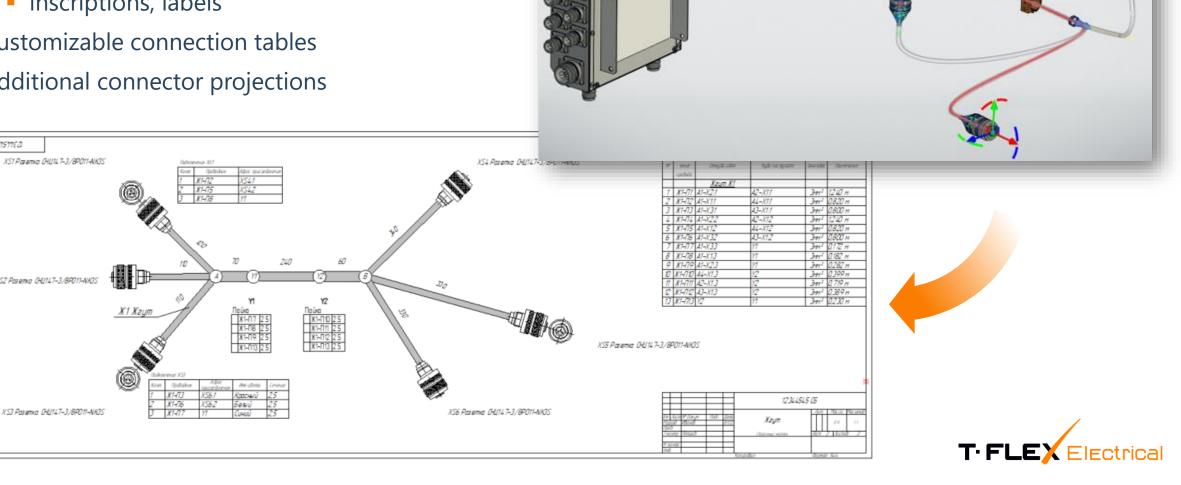

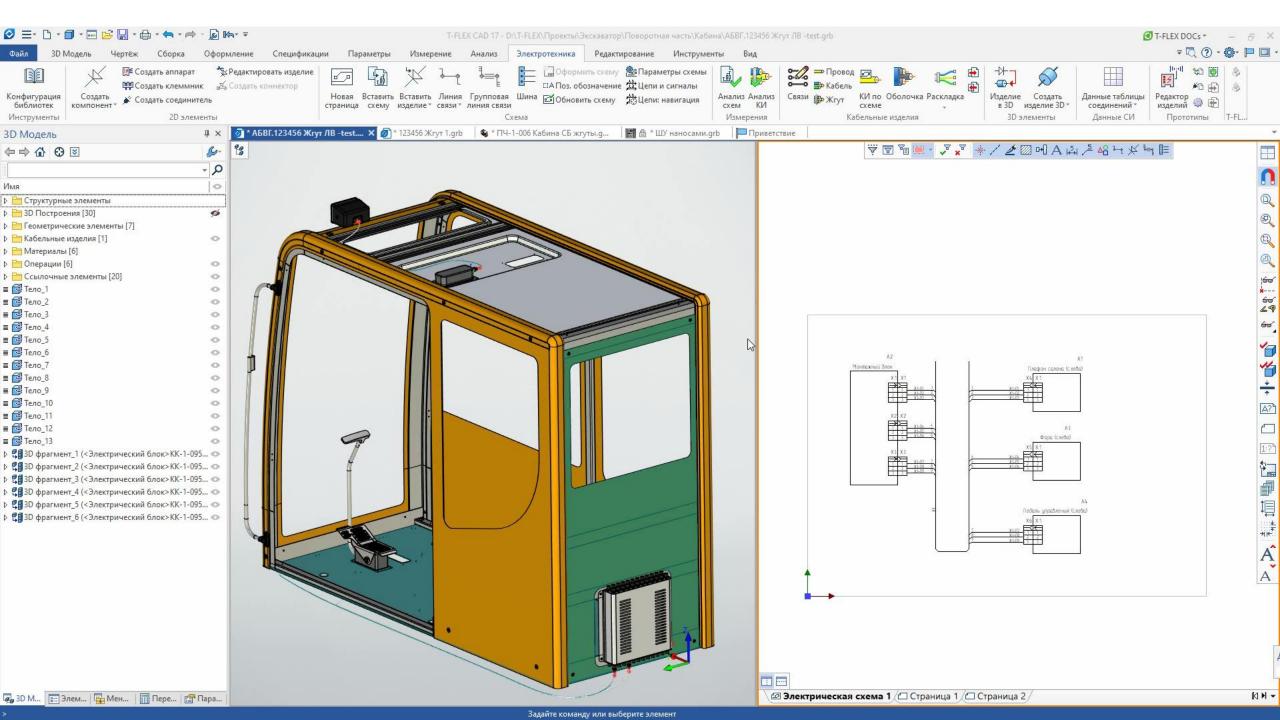

Creation of Graphical Design Documentation

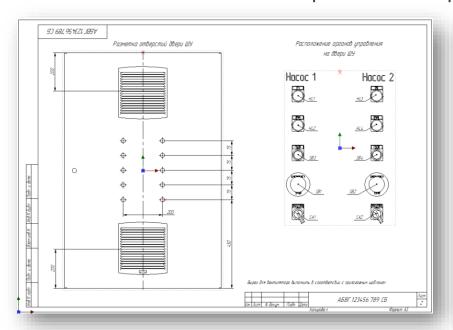

- Customizing the harness layout display:
 - segment diameter
 - dimension placement
 - inscriptions, labels
- Customizable connection tables
- Additional connector projections

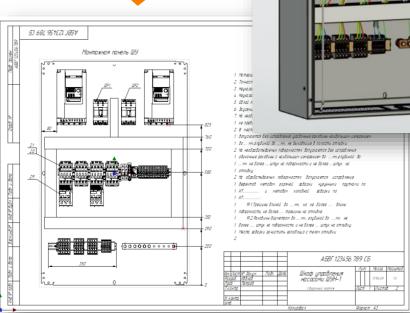

Creation of Graphical Design Documentation

- Automatic filling of the title block
- Automatic filling of technical requirements
- Generation of a set of drawings:
 - dimensional drawings
 - assembly drawings
 - general views
 - drawings with holes coordinates
- Link to model elements and product composition

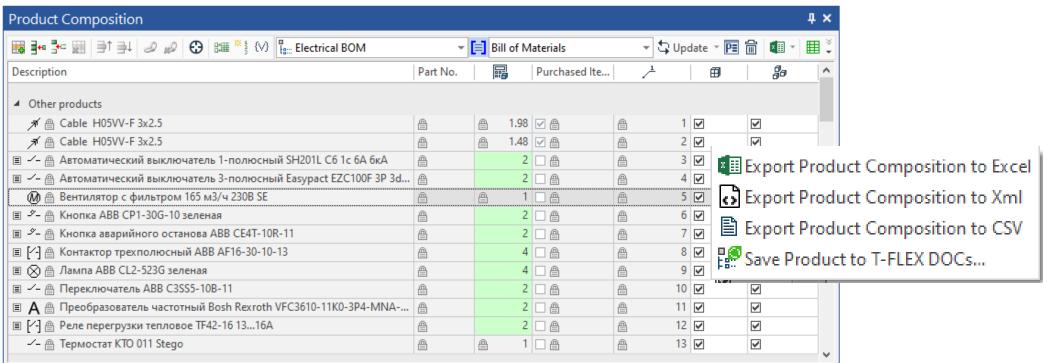

Saving Data in Various Formats

- Export of drawings to formats:
 - AutoCAD (*.dxf, *.dwg),
 - PDF (*.pdf)
- Export of 3D models to formats:
 - STEP (*.stp, *.step)

- Saving data of product composition to formats:
 - Excel,
 - XML,
 - CSV

Working in Unified Information Space

- Automatic generation of data information model
- Display of all interrelationships between project elements
